

DIAMOND™
S E R I E S

Quality Standards of the Diamond Series cartridges, produced exclusively by Coast to Coast, are certified to the highest standards in the industry. They are guaranteed to perform as well or better than anything on the market, including the Original Equipment Manufacturer.

ISO 9000 is a family of standards for quality management systems. Some of the requirements in the ISO 9001 standard include: documenting procedures, monitoring processes, keeping adequate records, taking corrective action, regularly reviewing the overall system and facilitating continuous improvement. The over idea is to establish a system to improve product quality and reliability.

The ISO 19752 standard is a standardized page yield test for monochrome (b/w) laser printer cartridges. The test is done with a minimum of nine cartridges tested on three separate printers with a standard print/test page under specific environmental conditions and printer settings.

The Standardized Test Methods Committee (STMC) is a global committee formed to find and promote standardized test methods for the printer cartridge industry. STMC testing incorporates a page yield test as well as packaging integrity parameters.

It is imperative to select a manufacturer who stands behind their products unconditionally. Look for extended warranties and manufacturers who back their product. In case of potential cartridge failure, look for the manufacturer's warranty that covers both your cartridge and your machine. If something in the cartridge were to damage the machine Diamond Series products are covered for a full two years.

The ISO 14000 environmental management standards help organizations minimize how their operations negatively affect the environment through an environmental management team (EMS). It specifies the requirements for establishing an environmental policy, determining environmental impact, planning, implementation as well as documented continuous improvement.

The ISO 19798 standard is a standardized page yield test for color laser printer cartridges. The test is done with a minimum of 12 cartridges (three sets of CMYK) tested on three separate printers with a standard set of five different print/test pages under specific environmental conditions and default printer settings.

The Accredited Standards Committee X9 (ASC X9) has the mission to develop, establish, maintain, and promote the standards for the Financial Services Industry. Look for products made by companies who are members of the X9 MICR Standards Committee.
